Full Stack Development Laboratory		

Name- Mukund Fegade

PRN- 123B1B197

Div- C

Assignment 2

Title:

Design a Personal Portfolio Page using HTML and CSS (Using Bootstrap CDN if required)

Objectives

- To design and develop a personal portfolio web page using HTML and CSS.
- To understand the structure of a responsive web layout using Bootstrap.
- To learn how to use Bootstrap CDN for styling and layout components.
- To create different sections such as Home, About, Skills, Projects, and Contact.
- To improve practical skills in front-end web development.

Outcomes

- Able to create a complete personal portfolio web page.
- Able to apply CSS styles for layout and design.
- Able to use Bootstrap classes to make responsive designs.
- Able to structure web pages using semantic HTML sections.
- Gain confidence in designing basic front-end projects.

Theory Concept

A Personal Portfolio Page is a web application that represents an individual's professional identity online. It typically includes sections such as About Me, Skills, Projects, Resume, and Contact Information. Portfolio websites are widely used by developers, designers, and professionals to present their work digitally.

1. HTML (HyperText Markup Language)

HTML is the standard markup language used to create the structure of web pages. It defines elements such as headings, paragraphs, images, links, forms, and sections. Semantic tags like <header>, <section>, <nav>, and <footer> improve readability, structure, and accessibility of webpages.

HTML provides the basic skeleton of the portfolio page, including:

- Navigation bar
 - Home section
 - About section
 - Skills section
 - Projects section
 - Contact section
-

2. CSS (Cascading Style Sheets)

CSS is used to style and format HTML content. It controls colors, layouts, spacing, fonts, and responsiveness. CSS enhances user experience by making webpages visually attractive and organized.

In a portfolio page, CSS is used to:

- Style headings and text
 - Add background colors and images
 - Create spacing and alignment
 - Design buttons and cards
 - Improve overall layout
-

3. Responsive Web Design

Responsive Web Design ensures that a webpage adjusts properly across different devices such as desktops, tablets, and mobile phones.

Key techniques include:

- Flexible grid layouts
- Media queries
- Responsive images
- Bootstrap grid system

Responsive design improves accessibility and user experience.

4. Bootstrap Framework

Bootstrap is a popular front-end framework that provides pre-designed components and a responsive grid system.

By using a Bootstrap CDN, developers can quickly include Bootstrap styling without downloading files.

Bootstrap provides:

- Navigation bars
- Buttons
- Cards
- Forms
- Grid system

Using Bootstrap reduces development time and ensures mobile-friendly design.

5. Front-End Development in Full Stack

In full stack development, the front-end layer focuses on user interaction and presentation. Designing a portfolio page helps in understanding:

- UI layout structure
- Visual hierarchy
- Responsive design principles
- Basic front-end development workflow

This experiment strengthens the foundation of web development skills.

Dataset Used

No external dataset was required for this experiment.

The portfolio page uses self-generated static content, including:

- Personal information (Name, education, profile summary)
- Skills list (technical and soft skills)
- Project descriptions
- Sample images or icons
- Contact details (email, phone, social media links)

All data used is static and manually entered within the HTML file.

Portfolio.html :

```
<!DOCTYPE html>
```

```
